ABOUT ME

Full stack engineer building and integrating the backend services, APIs and databases that keep client applications and products reliable at scale. Works across JavaScript and Python, and integrates AI and LLM capabilities into production features. Contributed to Mohajon Chat, an AI sales-agent and unified-inbox platform, building messaging APIs and channel integrations, and is comfortable owning a feature end-to-end from schema design through API delivery to deployment.

EDUCATION

Bachelor's Degree (Computer Science & Engineering)

LANGUAGES

English (fluent)

German (basic)

SKILLS & CERTIFICATES

Backend Development (Bun / Hono / Node.js) 9/10

Python 8/10

AI & LLM Integration 8/10

API & Webhook Integration 9/10

PostgreSQL & Drizzle ORM 8/10

Message Queues (BullMQ / Redis) 8/10

Cloud Applications & Deployment 8/10

INTERNATIONALITY

- Builds backend systems supporting clients and products across multiple markets
- Coordinates API integrations with third-party vendors and messaging platforms

INDUSTRY FOCUS

Backend Systems / APIs 9/10

AI SaaS / Messaging Platforms 8/10

Cloud Applications 7/10

KEY FOCUS AREAS

Backend Development

Designs and builds backend services and relational data models (PostgreSQL, Drizzle) that keep applications reliable at scale. Works across JavaScript and Python, owning features end-to-end from schema design to production API.

AI & LLM Integration

Integrates AI and LLM capabilities into product features, wiring model APIs into backend workflows. Builds the prompt, retrieval and data plumbing that turn model output into reliable, production-ready functionality.

API & Webhook Integration

Integrates third-party and messaging APIs — including Facebook and Instagram channels — handling auth, rate limits, webhooks and data sync. Keeps contracts stable and resilient against upstream failures and retries.

Async & Queue Processing

Builds background-job and message-queue workflows (BullMQ / Redis) for reliable, high-throughput processing. Offloads heavy and long-running work so user-facing requests stay fast under load.

Cloud Applications

Deploys and maintains backend services in cloud environments with an eye on cost and reliability. Handles environment config, monitoring and safe rollouts across deployments.

RECENT PROJECT EXTRACT

2024 – today

Mohajon Chat — AI Sales Agent & Unified Inbox (multi-channel messaging platform) – Backend Engineer

Industry: Software / AI SaaS

Role: Backend Engineer

Description: Contributes to the Mohajon Chat backend built on Bun/Hono, Drizzle and Better-Auth. Builds messaging and conversation APIs plus Facebook and Instagram channel integrations via a Go-based adapter. Designs webhook and background-job pipelines (BullMQ) that keep the unified inbox reliable under load. Owns data modeling and API contracts for a multi-tenant, multi-channel platform.

2022 – 2024

Backend Services & API Integration (multiple client platforms) – Full Stack Engineer

Industry: Software / Web Services

Role: Full Stack Engineer

Description: Built and integrated backend services, APIs and databases across client applications, working end-to-end from schema design to production deployment. Delivered REST endpoints and third-party integrations for live systems. Tuned data models and queries for performance under real traffic. Balanced feature delivery with reliability, keeping systems stable as usage scaled.

2021 – 2022

Web & API Development (multiple client engagements) – Backend Developer

Industry: Software / Web

Role: Backend Developer

Description: Developed backend features and REST APIs across several client engagements, from authentication and CRUD services to scheduled data-sync jobs. Modeled relational schemas and wired up third-party service integrations for production applications. Handled error handling, validation and background processing across services. Built the database and integration foundation that carried into the full stack role.

2020 – 2021

Full-Stack JavaScript & Python Development (Node.js, Python & React apps) – Software Developer

Industry: Software / Web

Role: Software Developer

Description: Built full-stack web applications across client projects, pairing Node.js and Python backends with React frontends. Designed REST APIs and data models on the server and consumed them in dynamic, component-based UIs. Wrote Python scripts and services for data processing, automation and early API integrations. Established the cross-language full-stack range that grew into the backend and AI-integration work today.
